

FIRE PREVENTION INVENTORY AND ACTION SUMMARY (CDF-15)

9180

(No. 7, Sept, 1991)

The Fire Prevention Inventory and Action Summary (CDF-15) is used (1) to inventory basic hazards and risks, (2) to summarize VIP staffing, and (3) to summarize programs and activities performed (see CDF-15: Fire Prevention Inventory). Data is collected and compiled on a unit basis to summarize the inventory, activities and programs that exist or that are accomplished in that geographical area. The compiled statewide data will be used for program analysis and planning, preparation of budget proposals, responding to public, legislative and governmental inquiries, and for providing required input to the Governor's budget and the California Fiscal Information System (CFIS). The unit, region office, and Sacramento headquarters summaries are processed by EDP and a summary report is compiled with inspection data from submitted LE-38s. A battalion or unit to assist in fire prevention planning should use data collected at the unit and region level.
